OCEANGUARD™ COASTAL ALUMINUM ROOFING

Coastal Roofing is a breeze with OceanGuard™ Aluminum Roofing from GulfCoast Supply. These beach friendly roofing panels feature a durable Aluminum core finished with **KYNAR500®** PVDF resin-based finishes.

Corrosion and Saltwater resistive, OceanGuard™ is the perfect choice for projects on or near shoreline properties.

The core of common metal roofing is Steel, with a Zinc-Aluminum coating. This composition is perfect for inland solutions but has not been engineered to withstand the unforgiving elements that come with coastline living. Harsh saltwater environments, including brackish and briny water zones, **leave common metal roofs susceptible to rust and corrosion.**

Residents and business owners from coastal cities turn to OceanGuard™ Aluminum Roofing from GulfCoast Supply to stand up against the unforgiving elements that come with coastline living.

To combat these extreme coastline conditions, we have introduced a system that uses a more resilient Aluminum core plus an ultra-fade-resistive **KYNAR500®** premium coating. Prior to the release of this revolutionary new product, attaining a warranty of any kind within 1000 meters (about 6/10 of a mile) of the coast would have been highly unlikely, if not impossible, leaving your coastal roof unprotected from claims against corrosion.

With the **OceanGuard™ Aluminum Roofing Series,** coastal residents and business owners will enjoy a **25 Year Saltwater Warranty** right on the beach; no setbacks required! Select from **5 unique profiles** stocked in **20 fade-resistive colors** of 0.032 Aluminum, with 0.040 available as a special order.

Unparalleled protection on the coast begins with OceanGuard™, the best Aluminum Roof on the market!

Features

- **NO SETBACK REQUIRED FOR WARRANTY**
- **25 YEAR SALTWATER WARRANTY**
- **KYNAR500® PREMIUM PVDF COATING**
- **AVAILABLE IN 0.032 & 0.040 ALUMINUM**
(See Availability Matrix for stocked colors)
